SUMMARY

Senior Software Engineer with 4+ years of experience architecting and delivering high-impact, full-stack applications using Angular and Spring Boot. Recognized as a technical SME and go-to architect within engineering teams, I helped drive system design decisions, shape data models, and lead cross-functional knowledge transfers. Proven track record of optimizing cloud-native services in Kubernetes/OpenShift environments and translating complex business processes into scalable and maintainable systems. Equally effective working autonomously or leading junior engineers toward delivery.

EXPERIENCE

IMC Logistics, Collierville, TN | March 2023 – Present

Senior Programmer Analyst (Software Engineer) | April 2026 – Present

- Led end-to-end system design for a greenfield initiative by defining service boundaries, data relationships, and API contracts that aligned with both business requirements and long-term architectural maintainability.
- Partnered directly with product owners and development teams to translate ambiguous business processes into concrete technical designs, reducing design iteration cycles and preventing downstream rework.
- Contributed to early-stage architectural decisions across multiple domains, shaping patterns adopted by the broader engineering organization.

Programmer Analyst (Software Engineer) | March 2023 – March 2026

- Designed and owned a full-stack audit processing application (Angular + Spring Boot) that reduced manual audit processing time by over 60%, giving drivers direct visibility into future pay withholding calculations.
- Served as the technical SME and primary knowledge owner for system architecture — created documentation, conducted knowledge transfers, and onboarded multiple engineers, reducing ramp-up time from weeks to days.
- Optimized Spring Boot microservices for Kubernetes/OpenShift deployments via GitLab CI/CD, achieving measurable reductions in container startup time, memory footprint, and P95 API latency.

TEKsystems, Memphis, TN | September 2022 – March 2023

Associate Programmer Analyst (Software Engineer)

- Maintained and enhanced internal Angular/Express.js applications by resolving bugs escalated via Jira and delivering UX improvements based on end-user feedback.
- Designed and implemented an automated email parsing system integrated with dispatching infrastructure, eliminating the need for drivers to manually scan interchange documents and reducing per-driver administrative overhead.
- Provided frontline technical support and translated user-reported issues into well-scoped Jira stories for engineering backlog prioritization.

Kenlake Foods, Murray, KY | January 2020 – July 2020

Project Engineering Co-Op

- Applied data-driven analysis to improve manufacturing process performance and reduce production defects, supporting KPI tracking across yield, downtime, and cycle time metrics.

Revel Enterprises, Paris, TN | August 2016 – September 2018

IT Data Specialist

- Wrote and optimized complex SQL queries to extract, transform, and surface business-critical data for engineering and operations stakeholders.
- Acted as a technical bridge between raw data systems and business consumers, improving data accuracy, availability, and performance.

Four Seasons Sales & Service, Paris, TN | July 2014 – July 2016

IT Help Desk

- Developed scripts to automate customer reporting workflows, eliminating hours of daily manual report generation.
- Diagnosed and resolved application, hardware, and network issues (DNS, TCP/IP, VPN), bridging the gap between end users and software engineering teams.

EDUCATION

Bachelor of Science in Computer Science – *University of Memphis*, Memphis, TN | August 2022

Concentration: Artificial Intelligence

SKILLS

Languages: Java, Typescript, Javascript, SQL, Python, C, C#,

Frameworks: Spring Boot, Angular, Express.js

Databases: PostgreSQL

Cloud & DevOps: Docker, Kubernetes, OpenShift, Gitlab CI/CD, Helm, Podman

Other Tools: Visual VM, Jira
